vessels on your face and reduce the flush appearance. For acne, you might be prescribed topical benzoyl peroxide, which can help kill the bacteria that causes acne. Severe cases of rosacea or acne may be treated similarly. You may be prescribed antibiotics for severe acne and rosacea that involves hard, pus-filled lumps.

Do I Have Acne or Rosacea? - GoodRx

What Is Acne Rosacea?

Rosacea is an inflammatory skin disorder that causes a red rash to appear on the face. It is typically concentrated around the nose and cheeks, but has also been known to affect the eyes. Acne rosacea is a subtype of rosacea that causes the appearance of inflamed, red bumps

(commonly referred to as rosacea) is a common skin disease which is characterized by redness, papules, pustules, and swelling. Commonly mistaken for acne vulgaris in its early stages, acne rosacea is a relapsing condition, which can be exacerbated by sun exposure, heat, alcohol, strong emotions, caffeine, and spicy foods.

Sometimes the lesions of facial acne and rosacea look similar, for instance, both diseases can come with papules and pustules. Because some lesions of acne and rosacea can look similar, historically, researchers referred to one of the subtypes of rosacea as "acne rosacea." Despite these similarities, acne and rosacea are not

Papulopustular rosacea (AKA acne rosacea) presents with the same inflamed red bumps and pustules that you see in cystic or inflammatory acne. In these cases, “the triggers for rosacea vs. acne can also be important in distinguishing the two,” explains Dr. Bradley Glodny , a New York-based, board-certified dermatologist
