Pythagorean Theorem Word Problems (examples, solutions ...

Furthermore, since the two sides of the roof make a right triangle, we can use the Pythagorean theorem to find the length of the beam. $c^2 = a^2 + b^2$ $c^2 = 25^2 + 25^2$. $c^2 = 625 + 625$. $c^2 = 1250$. $c = \sqrt{1250} = 35.35$. The length of the beam is 35.35 feet. More interesting Pythagorean theorem word problems

A simple equation, Pythagorean Theorem states that the square of the hypotenuse (the side opposite to the right angle triangle) is equal to the sum of the other two sides. Following is how the Pythagorean equation is written: $a^2+b^2=c^2$. In the aforementioned equation, c is the length of the hypotenuse while the length of the other two sides of the triangle are represented by b and a .

Number symbolism - Number symbolism - Pythagoreanism: The earliest known systematic cult based on the rule of numbers was that of the Pythagoreans. Pythagoras was a Greek who thrived in the 6th century bce. Little is known of his life, and in fact he may be a composite figure to whom the discoveries of many different people have been attributed by his followers.
